Education

North Carolina Agricultural and Technical State University

B.S. Information Technology

Greensboro, NC

May 2028

Skills

Programming Languages: Python, GML, HTML, TypeScript

Operating Systems and Tools: Windows, MacOS, Linux

Soft-Skills: Communication, teamwork, time management, adaptability, work ethic, thoroughness, leadership, discipline, reliability, stress management.

Work Experience

IT Help Desk

North Carolina A&T University

Greensboro, NC

August 2026

- **First-level** technical support to students and faculty, troubleshooting hardware, software, and account-related issues.
- Resolved service requests in person and remotely while documenting tickets and following escalation procedures.
- Delivered clear, professional customer support in a **fast-paced** academic environment.

Various Restaurant Positions

Borgo Italia, Five Guys, Panera Bread, Crumbl, Karvela Pizza

Various Cities, GA

Aug 2021 - Sept 2025

- Customer service and front-of-house support in **fast-paced** food environments.
- Processed **50-100+** orders per hour during peak periods with high accuracy.
- Trained to **manage** shift responsibilities, support team members, and **maintain service standards**.

Projects

STEGANOS — Steganography & Steganalysis Toolkit

2026

TypeScript, Vite, Vitest, Web Crypto API, GitHub Actions

[Link to repo](#) · [Live demo](#)

- Built a browser-based tool that embeds **AES-256-GCM** encrypted payloads in **PNG images (LSB)** and plain text (**zero-width Unicode**), paired with **chi-square and sample-pair steganalysis** to detect the same techniques.
- Designed a layered architecture keeping encryption and position-selection logic carrier-agnostic, so adding a new format requires one module rather than restructuring.
- Wrote **38 tests** covering round-trip integrity, failure modes, and steganographic properties; gated deployment on the suite passing via **GitHub Actions**.
- Documented known limitations, including an uncalibrated detection threshold identified by working through the underlying math.

Personal Game Design Project

- Built a 2D platformer prototype in **GameMaker Studio** (a C-based engine) with a **state-machine logic system**, enemy AI, smooth camera tracking, and sprite animation — using **GitHub** for version control and **Claude** for prompt-engineered bug fixes and optimization.

Honors and Activities

FOSSI Scholar

Scholarship/Sponsorship Program

\$40,000 Scholarship to attend a HBCU and major on STEM

Connects me with **100s** of companies for networking, funding, and mentorships

Women in Science And Technology (WiST)

Greensboro, NC

Treasurer

August 2026

- Manage membership dues collection and maintain accurate financial records for a large STEM organization
- Coordinate with faculty advisor to ensure financial transparency and organizational compliance
- Collaborate with executive board to support high-quality programming and events across science and technology disciplines

FMA x EMB FinTech Case Competition

- Won **2nd Place** for data presentation, market analysis, and business model in a student competition solving economic problems through **Artificial Intelligence** and **FinTech**; our solution targets **impulsive spending among young adults** using intrusive reminders, spending tracking, and **AI insights**.

Rockwell Automation Innovation Challenge

- Won **1st Place** for overall performance, efficiency, and technical execution, applying manufacturing operations, **SQL database** design, and introductory **PLC programming** within an **Industry 4.0** context.

Cybersecurity CTF Competition

- Malware Analysis & Threat Intel: Identified Babuk-derivative ransomware via **SHA256** hash pivoting and threat intelligence correlation; extracted **IOCs** including mutex strings and behavioral indicators.
- Azure AD / M365 Forensics: Analyzed **Entra ID** logs to reconstruct a cloud attacker kill chain — account compromise, role escalation, **OAuth** consent abuse, and persistence via malicious applications and guest accounts.
- Reverse Engineering: Performed static analysis on **Windows PE** samples to identify anti-debugging and file-corruption routines without detonation.
- AI Red-Teaming / Prompt Engineering: Crafted adversarial inputs to bypass an LLM-based ticket-classification system.
