Introduction

Computer Science and **Cybersecurity** student with **hands-on AI experience**, offering strong **customer-facing technical expertise**, excellent communication skills, and a proven ability to quickly adapt to new systems. Eager to contribute to **Software Engineering**, **Cybersecurity**, and **AI roles** with reliability and problem-solving capabilities

Education

North Carolina Agricultural and Technical State University
B.S. Computer Science, May 2028 | **GPA: 3.12**

Greensboro, NC

Georgia Military College
Associates of Science, May 2027 | **GPA: 3.06**

Fairburn, GA

Skills

Programming Languages: Python, GML, HTML

Operating Systems and Tools: Windows, MacOS, Linux

Soft-Skills: Communication, teamwork, time management, adaptability, work ethic, thoroughness, leadership, discipline, reliability, stress management.

Work Experience

IT Help Desk

North Carolina A&T University

Greensboro, NC

Jan 2026

- **First-level** technical support to students and faculty, troubleshooting hardware, software, and account-related issues.
- Resolved service requests in person and remotely while documenting tickets and following escalation procedures.
- Delivered clear, professional customer support in a **fast-paced** academic environment.

Various Restaurant Positions

Borgo Italia, Five Guys, Panera Bread, Crumbl, Karvela Pizza

Various Cities, GA

Aug 2021 - Sept 2025

- Customer service and front-of-house support in **fast-paced** food environments.
- Processed **50–100+** orders per hour during peak periods with high accuracy.
- Trained to **manage** shift responsibilities, support team members, and **maintain service standards**.

Projects

Personal Game Design Project

- Using **GameMaker Studio**, a **C-based** game engine, I developed a 2D platforming game prototype as a foundational draft for a larger project.
- Used **Github** for **Version Control** and to collaborate with my partner
- Created clear, structured game design and technical documentation to communicate mechanics, systems, and development decisions effectively
- **Prompt Engineered** with **Claude** for **bug fixes**, **implementation**, **optimization**.
- Features include: **Smooth Camera Tracking**, **Player Action**, **Visual Effects**, **2D Sprite Animation**, State Machine Based Logic System, Enemy AI, etc.

Honors and Activities

FOSSI Scholar

Scholarship/Sponsorship Program

- **\$40,000** Scholarship to attend a HBCU and major on STEM
- Connects me with **100s** of companies for networking, funding, and mentorships

FMA x EMB FinTech Case Competition

- Won **2nd Place** for overall data presentation, market analysis and overall business model,
- A competition between students to solve economical problems through **Artificial Intelligence**, **FinTech**, or **advanced data systems**
- Our solution targets **impulsive spending among young adults** by using intrusive reminders, spending tracking, and **AI insights** to prevent small purchases from compounding into significant financial loss.
- Collaborated closely with a teammate to brainstorm ideas, map out workflows, and model potential solutions.

Rockwell Automation Innovation Challenge

- **Won 1st Place** for overall performance, efficiency, and technical execution in the challenge.
- Competed in the Rockwell Automation Innovation Challenge, a **hands-on simulation of a modern automotive manufacturing assembly line**.
- Applied foundational skills in manufacturing operations, **SQL database** design, and introductory **PLC programming** within an **Industry 4.0** context.

Cybersecurity CTF Competition

- Malware Analysis & Threat Intel: Identified Babuk-derivative ransomware via **SHA256** hash pivoting and threat intelligence correlation; extracted **IOCs** including mutex strings and behavioral indicators.
- Azure AD / M365 Forensics: Analyzed **Entra ID** logs to reconstruct a cloud attacker kill chain — account compromise, role escalation, **OAuth** consent abuse, and persistence via malicious applications and guest accounts.
- Reverse Engineering: Performed static analysis on **Windows PE** samples to identify anti-debugging and file-corruption routines without detonation.
- AI Red-Teaming / Prompt Engineering: Crafted adversarial inputs to bypass an **LLM-based** ticket-classification system.
